

THE LIVING ENVIRONMENT

ACROSS

- 1 active proteins that are never lazy; some are able to build while others break apart molecules
- 2 a science that deals with the raising of crops and the care of the land
- 3 a sweet tasting simple carbohydrate
- 5 can be popped, can be eaten off the cob, and can be processed for use in cereal and drinks
- 6 a nutrient we need to grow, can be a sugar or starch
- 8 fluid in the mouth, helps us digest starch
- 11 the part of a plant that grows into the soil
- 12 carrots, celery, lettuce, and broccoli are in this important food group
- 13 the part of a plant containing seeds, sugars are the carbohydrate found in this food group
- 14 a living organism that grows in the soil, processes sunlight into energy, and comes in many sizes
- 15 indicates the presence of starch by turning from yellow-brown to black

DOWN

- 1 the part of the seed that becomes the growing plant
- 2 the management and cultivation of the land
- 3 one who studies science
- 4 the part of a plant that makes energy from the sun and turns from green to yellow and red in autumn
- 7 a chemical that changes color when it finds what it is looking for
- 9 the process by which food is broken down
- 10 the carbohydrate found in corn and potatoes, iodine turns black when it finds it
